DOCUMENT REVISION LOG

Document: Greenhouse Operation SOP

[illegible]

ACRONYMS & DEFINITIONS

EHS	Environmental Health and Safety
EOHS	Employee/Occupational Health Services
Escaped Plant	A cultivated plant that has begun growing wild through volunteer seedlings or unchecked growth.
Environmental Differences	Differences in light, water, humidity, temperature, or nutrient requirements.
EPA	Environmental Protection Agency
Fertilizer	A substance containing one or more recognized plant nutrients, and used for its plant nutrient content.
GFCI	Ground-Fault Circuit Interrupter
Greenhouse	Any operation engaged in the production of agricultural plants inside any structure or space that is enclosed with nonporous covering and that is of sufficient size to permit worker entry. This term includes, but is not limited to, polyhouses, mushroom houses, rhubarb houses, and similar structures. It does not include such structures as malls, atriums, conservatories, arboretums, or office buildings where agricultural plants are present primarily for aesthetic or climatic modification.
Headhouse	An addition or section of a greenhouse that serves as the “work center.” Headhouses provide additional functional work space without sacrificing valuable growing area within the greenhouse. These rooms are often used for storage, office space, quarantine space, and potting areas.
Herbicide	A chemical used to destroy undesirable plants and vegetation.
Insecticide	Insecticides are chemicals used to control insects by killing them or preventing them from engaging in undesirable or destructive behaviors. They are classified based on their structure and mode of action.
NRTL	Nationally Recognized Testing Laboratory
OSHA	Occupational Safety and Health Administration
Pesticide	Any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest.

	Any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant. Any nitrogen stabilizer.
PI	Principal Investigator
PPE	Personal Protective Equipment
Rooting Hormone	Accelerates the growth of a plant by helping a cutting switch from producing green stem cells to manufacturing root cells.
RMM	Research Material Management
RUPs	Restricted Use Pesticides - not available for purchase or use by the general public. RUPs have the potential to cause unreasonable adverse effects to the environment and injury to applicators or bystanders without added restrictions. The "Restricted Use" classification restricts a product, or its uses, to use by a certified applicator or someone under the certified applicator's direct supervision
SDS	Safety Data Sheet
SOP	Standard Operating Procedure
UL	Underwriters Laboratories
UNM	University of New Mexico

1. UNM'S COMMITMENT TO SAFETY

Safety is a core value of the University of New Mexico. UNM is committed to creating and fostering a culture of safety within the University community. Part of demonstrating this commitment includes providing resources and references for the safe operation of a greenhouse. To learn more about UNM's commitment to safety, visit <https://ehs.unm.edu/culture-of-safety.html>.

2. SCOPE AND APPLICABILITY

This protocol applies to all faculty and staff who conduct work in greenhouses at UNM. Visitors who are temporarily using these spaces are also expected to be aware of and abide by this protocol.

3. RESPONSIBILITIES

3.1. Greenhouse Manager

- Control access to the greenhouses
- Enforce safety rules and procedures
- Report issues to the PI
- Maintain records
- Develop greenhouse-specific safety policies, requirements, and procedures and ensure they are being followed

3.2. Principal Investigator (PI)

- Ensure compliance with rules and procedures
- Ensure relevant training is provided to staff and students using the greenhouse(s) and maintain training records
- Report issues to the greenhouse manager
- Maintain applicable licenses
- Develop Standard Operating Procedures (SOPs) for hazardous processes utilized in the greenhouse(s) and ensure they are being followed
- Provide PPE and ensure it is being used properly

3.3. Staff and Students

- Complete training
- Comply with rules and procedures
- Inspect each piece of equipment prior to use

- Use, maintain and store PPE appropriately
- Report issues to the PI and/or greenhouse manager

3.4. Environmental Health & Safety (EHS)

- Maintain this protocol
- Inspect greenhouses annually for compliance
- Investigate incidents and/or safety concerns

3.5. Facilities Management (FM)

- Maintain ventilation systems
- Maintain heating/cooling systems
- Maintain irrigation systems

3.6. Visitors

- Understand and comply with greenhouse rules
- Abide by the posted safety and health signage

4. GENERAL SAFETY

- The name of the Greenhouse Manager and PIs must be posted either on the greenhouse door or inside the greenhouse
- Emergency contact phone numbers must be posted either on the greenhouse door or inside the greenhouse
- Rules and standard operating procedures (SOPs) must be available in the greenhouses
- Greenhouse access should be limited to those approved by the Greenhouse Manager/PI
- Guests must comply with all posted greenhouse rules
- The doors to the greenhouses must be closed at all times
- Doors and latches must be functional
- Greenhouses should be kept locked after hours
- No food, drink, tobacco products permitted in the greenhouses
- Service animals may be permitted but will require prior approval
- All greenhouses should have a headhouse or service building
- All containers in the greenhouse must be labeled, including water. Containers of hazardous materials must be labeled with the name of the material and an indication of the hazards.
 - Example #1: urea fertilizer poured into a working container must be labeled “Urea, Corrosive, 8/22/23”
 - Example #2: a spray bottle of water must be labeled as “Water”

- Repairs should occur while research is inactive, if possible. If there are ongoing studies with no shut-down periods, repair personnel must be made aware of the hazards present
- Clothing shall include long pants and closed-toed, slip-resistant shoes
- Keep intake vents clear of obstructions
- Walkways must be at least 24 inches wide and must be kept clear of obstructions and/or trip hazards
- Walkways should be cleared of weeds and free of moss and algae growth
- Hand tools with loose heads or split/defective handles must be repaired or replaced
- Reduce heat stress by providing shade and/or installing fans in the work areas if possible. Train staff/students in heat stress prevention. Heat Stress training is available on Learning Central
- A digital thermometer should be placed at the entrance to determine whether it is safe to enter
- Do not locate thermostats near heating lines, air inlets or outside walls
- Users should always be aware of weather conditions such as hail or high winds. When these conditions are present, avoid the greenhouse(s) and find shelter in a structurally sound building

5. PLANTS

- Escaped plants must be immediately destroyed
- Plants should be identified with the species, environmental differences, and a unique identifier
- No outside plants are permitted in greenhouses
- For teaching spaces, only the plants for the classes are permitted; greenhouses are not for personal plants
- Organic and non-organic crops can be grown within the same structure if the following conditions are met (USDA 205.209):
 - a. If synthetic pesticides are applied to the non-organic crop, an impermeable wall shall separate organic and non-organic production sites, and;
 - b. The ventilation system must ensure that prohibited materials do not drift to the organic production area

6. REQUIRED SIGNAGE

Hazard communication door signage provides critical information to greenhouse users, visitors, and emergency responders and alerts them to specific hazards. See Attachment A.

- Red or orange “biohazard” door signs indicating human biohazards must be posted at the entrance of rooms where microorganisms or biological toxins known to cause disease in humans are used. This includes microorganisms requiring containment at Biosafety Level 2 (BSL-2) or greater and human blood, tissues, cell lines or other potentially infectious materials (OPIM)
- Yellow “biohazard” door signs indicating animal biohazards must be posted at the entrance of rooms where animal pathogens are used
- Dark green “biohazard” door signs indicating plant biohazards must be posted at the entrance of rooms where plant pathogens or pests are used, or where certain GMO plants are grown, stored, or processed

7. HAZARDOUS MATERIALS

7.1. Chemicals

- Safety Data Sheets (SDSs) for all chemicals, pesticides, herbicides, fertilizers and insecticides must be immediately accessible to those working in the greenhouses
- Pesticides and fertilizers that are hazardous (flammable, toxic, corrosive, reactive, oxidizer) must be tracked via UNM’s chemical inventory management platform (RMM)
- Greenhouses should not be used to store pesticides or other greenhouse chemicals. Designate a separate storage area for greenhouse chemicals
NOTE: Never store more than 400 pounds of ammonium nitrate in one location
- No food, drink or tobacco products should be present in the chemical storage area
- Hazardous materials (pesticides, fertilizers, etc.) may not be applied without permission from the Greenhouse Manager
- Utilize protective measures and don personal protective equipment (PPE) when handling hazardous materials (refer to Section 8 of the SDS and the instructions on the label)
- Refer to the UNM Chemical Hygiene Plan for information on storing and disposing of hazardous chemicals [[chemical-safety-program-2022.pdf \(unm.edu\)](#)]

7.2. Pesticides

- Records of Restricted Use Pesticides (RUPs) must be kept for 2 years (see Attachment B for list of RUPs)
- State laws and regulations require that a person who purchases or applies RUPs must have a current license [New Mexico Pesticide Licensing \(nmsu.edu\)](#)

- Careful attention must be paid to the details of how fumigation is performed in order to guarantee precise control of the targeted organisms, complete safety for workers and other persons close to the treated area, and limiting the impact the product(s) could have on our environment
- Registrations and use restrictions of fumigants vary by state and can change annually; carefully read the most current product labels and carefully follow all label requirements and recommendations
- Due to the contribution of methyl bromide to the destruction of ozone in the atmosphere, it was phased out for crop production in the US in 2005
- Warning signs and/or hazard notification stickers must be posted when toxic pesticides are in use with date and time that the space can be accessed
- Pesticides must only be applied by trained and authorized personnel
- Keep pesticides in a secured storage area that is accessible only to those who are trained to use them

7.2.1. Safety Considerations for Pesticide Mixing & Application

- Liquid flowables do not present an inhalation hazard since the powder is suspended in water
- Dusts provide excellent coverage but create an inhalation hazard
- Granules have a reduced inhalation hazard but some fine particles are still present
- Pellets provide a high degree of safety to the applicator
- Wettable powders tend to pose a lower dermal hazard compared to liquid formulations
- Soluble powders create an inhalation hazard during mixing
- Water-dispersible granules have a reduced inhalation hazard

7.2.2. Physical Compatibility Test for Pesticide Mixing

- Add proportionate amounts of the pesticides you intend to mix in a clear quart jar. Add one at a time in the order suggested on the label(s). Gently shake or invert the capped jar, then let stand for 15-30 minutes. If the two are not compatible, there will be a noticeable separation, layering, or the formation of flakes or crystals. If the two are compatible, the solution will appear homogenous or look like milk

7.3. Fertilizers

- The Association of American Plant Food Control Officials (2019) establishes minimum allowable levels of nutrients and provides specific labeling requirements:
 - a. Brand and grade

- b. Guaranteed analysis
- c. Directions for use
- d. Name and address of registrant
- e. Net weight.
- Keep a separate sprayer for applying plant growth regulators

7.4. Herbicides

- If using chemical weed control, select only those herbicides that are labeled for greenhouse use. Avoid herbicides that may become gaseous in the greenhouse.

7.5. Irrigation Water

- Chlorine gas injection systems for irrigation water are prohibited in greenhouses at UNM
- Use caution when dissolving calcium hypochlorite in water because of the possible formation of chlorine gas
- Chlorine dioxide dissolves easily in water and does not react as easily, as its mode of action is solely by oxidation

7.6. Rooting Hormones

- Powdered Products: Wear gloves during application. Transfer enough hormone to a smaller container from the main stock container for use; never transfer unused hormone back to the main stock container.
- Ensure that smaller containers are labeled with the words “Root Hormone”
- Liquid Products: Wear gloves during mixing, preparation and application. Place the solution in a clean jar and label appropriately.
- Discard any remaining solution through EHS. **DO NOT POUR DOWN THE DRAIN.**

8. RESPIRATORY PROTECTION

- Users required to wear respiratory protection must be fit tested through EHS
 - a. Obtain medical clearance through EOHS (505-272-8043)
 - b. Schedule your test through Learning Central
- Users who voluntarily wear respiratory protection must sign the acknowledgement at [Voluntary N95 Use :: Environmental Health & Safety | The University of New Mexico \(unm.edu\)](https://ehs.unm.edu/voluntary-n95-use)

9. ELECTRICAL SAFETY

9.1. General

- Check electrical cords regularly and replace any damaged or frayed cords immediately
- Outlet and irrigation timers must be UL or NRTL listed and should be approved for non-residential usage
- Outlets must be GFCI protected
- 2-prong timers and adapters are prohibited
- For high-current draw items, an industrial timer needs to be installed by a qualified electrician; submit a [Service Request](#) to FM.
- Thermostats must have the cover installed
- Electrical boxes, conduits and fittings must be intact and covered. Open knock-out plugs must be filled
- Heaters must be code appropriate and be approved by EHS
- Avoid getting growth lamps wet, especially when on

9.2. Fans

- Fans within 7 feet of the floor or working level must be guarded in accordance with 29 CFR 1910.212(a)(5). The guard must not have openings greater than one-half inch in width
- The use of concentric rings with spacing between them not exceeding a one-half inch are acceptable, provided that sufficient radial spokes and firm mountings are used to make the guard rigid enough to prevent it from being pushed into the fan blade during normal use
- Belt-driven fans must have a belt guard in place with no opening larger than one-half inch
- Guards must be in good condition with no damage causing an opening of more than one-half inch nor permitting the guard to be pushed into the rotating assemblies
- Replace rusted guards

10. EMERGENCY PREPAREDNESS

To ensure a safe greenhouse environment, this protocol places significant importance on emergency preparedness. Each greenhouse must have:

- Emergency contact information posted in a prominent location
- First aid kit

- Spill kit

Greenhouse personnel must be aware of the locations of emergency equipment such as fire extinguishers, fire alarm pulls, safety showers, and eyewash stations

11. ACCIDENT AND INCIDENT REPORTING

- Ensure the safety of those in the greenhouse (first aid, evacuation, etc.)
- Seek medical assistance - **CALL 911 for Severe Injuries**
- University employees should contact Employee Occupational Health Services (EOHS) at (505) 272-8034
- Students should contact Student Health & Counseling (SHAC) at (505) 277-3136
- After normal business hours go to the emergency room or urgent care
- Inform your PI and Greenhouse Manager as soon as possible
- File an incident report at [EHS Accident, Incident & Spill Reporting](http://ehs.unm.edu/accident-incident-spill-reporting/index.html) (<http://ehs.unm.edu/accident-incident-spill-reporting/index.html>) as soon as possible

12. ANNUAL INSPECTIONS

All greenhouses will be inspected annually by EHS. Inspectors will assess the greenhouse's compliance with this protocol and provide guidance in the event that safety issues are identified. The inspections will be scheduled with the PI and/or greenhouse manager at least one week in advance.

13. SOPs AND TRAINING

All greenhouse personnel who work with hazardous chemicals must be trained on the hazards of the chemicals and the methods to protect themselves from the hazards. Training should include a combination of reading SOPs/written instructions that have been created by the PI and/or greenhouse manager, plus hands-on training. Training records must be maintained and at a minimum must include the name of the training, the date of training, and signatures of training attendees.

14. WASTE DISPOSAL

Waste materials, such as soil contaminated with pesticides and Unwanted chemicals must be collected, labeled, stored and disposed of properly. Greenhouse personnel are responsible for identifying, labeling, properly storing and coordinating the disposal of all wastes generated in Greenhouses. More information on chemical waste and requesting a waste pickup is located

here:

<https://ehs.unm.edu/waste-management/index.html>

15. REFERENCES AND FEDERAL REGULATIONS

- Association of American Plant Food Control Officials
- Clean Air Act
- Clean Water Act
- Department of Homeland Security (DHS), Chemical Facility Anti-Terrorism Standards (CFATS)
- Endangered Species Act
- EPA Federal Food, Drug, and Cosmetic Act limits pesticide residues on food in interstate commerce
- EPA Federal Insecticide, Fungicide, and Rodenticide Act governs the sale and use of pesticide products
- Food, Agriculture, Conservation, and Trade Act
- New Mexico Department of Agriculture
- OSHA
- Resource Conservation and Recovery Act
- Safe Drinking Water Act
- The Association of American Plant Food Control Officials (2019) establishes minimum allowable levels of nutrients and provides specific labeling
- Transportation Safety Act
- United States Department of Agriculture
